Focus

Sharpness
of thought

Training Method

The goal is to measure and train reaction times, understanding voice instructions, in the face of changing visual challenges.

How it works?

Different objects are presented in different colors, at varying speeds, and visual and audio decisions must be made, measured and trained, sharp thinking and decision-making processes.

Measurement

The goal is to measure and train reaction times, understanding voice instructions, in the face of changing visual challenges.

The concept of attention deficit refers to a person's ability to focus on a certain activity for a long time. Concentration difficulties or attention difficulties are defined as a condition in which an individual's attention abilities are lower, permanently or temporarily, than expected of his peers.

Tip of champions

Things can get complicated.
Pay attention to the
changing instructions.

LUNAMIND is a startup company, specializing in technologies to improve thinking processes, and focuses on brain technologies. Our main activity and research is in developing an algorithm to improve thinking processes, memory and focus. We bring a revolutionary approach to the process of cognitive decline, which mainly characterizes the third age group.
