

Sniper

Focus

Sharpness
of thought

Responsiveness

Training Method

Attention!! gaze focus!

Focus your gaze on the circles that matter.

How it works?

It is necessary to focus the gaze (eye focus and concentration) in circles of high value, do not be tempted, do not lose concentration.

Measurement

Calculating the ratio between saccade and Z (eye movement) and gaze focus(concentration).

The concept of attention deficit refers to a person's ability to focus on a certain activity for a long time. Concentration difficulties or attention difficulties are defined as a condition in which an individual's attention abilities are lower, permanently or temporarily, then expected of his peers.

Tip of champions

You should ignore the red circles, grab the white circles and give preference to circles where values are high.

LUNAMIND is a startup company, specializing in technologies to improve thinking processes, and focuses on brain technologies. Our main activity and research is in developing an algorithm to improve thinking processes, memory and focus. We bring a revolutionary approach to the process of cognitive decline, which mainly characterizes the third age group.
